

RPAV Scope of work for “Super League Games” site survey.

(Overview)

The purpose of this site survey is to obtain information on each movie theater location for future install of SLG equipment. This equipment will allow gamers in the audience access to the game interface with laptops. The game will be shared with the video and audio over the theater system.

The “later” install will be a small floor equipment rack placed in the projection booth. This rack will be connected to the projector for video and another connection to the audio rack. To provide Wi-Fi to the gamers, there will be a wireless access point mounted in the theater above the projector window on the ceiling 2’ from the projector room wall. The WAP will be connected to the SLG rack over Cat5e.

Before the install please have your tech review our YouTube video and example photos. This will speed up the onsite time.

What will be needed on the survey?

- Verification with the project manager on the location, date, and time of the job.
- Call to check in when onsite.
- Checklist and sign off forms.
- High resolution camera or smartphone.
- Flashlight.
- Tape measure.
- 8’ to 20’ ladder.

Please send all the completed forms and all photos back to your project manager.
